EDUCATION

Kanpur Institute of Technology, AKTU

Bachelor of Technology in Computer Science and Engineering (AI/ML Specialization)

Kanpur, India

2023 – June 2027

- **Academic Standing:** CGPA 7.3/10.0; Core Focus: Machine Learning, Numerical Methods, Scientific Computing.
- **Availability:** Available to start immediately for full-time on-site or remote engineering roles (College NOC available on request; end-semester exams only).

AUTONOMOUS SYSTEMS, GNC & SIMULATION

6-DOF Aerodynamic Guidance & Trajectory Simulation (SIH26) | C++, Python, EKF, Onshape

2026

- Modeled 6-DOF ballistic trajectory simulation and Augmented Proportional Navigation (APN) guidance law for 155mm munition, targeting $\leq 30\text{m}$ CEP over $20\text{km}+$ ballistic arc (Ministry of Defence / SIH26098).
- Implemented 16-state Extended Kalman Filter (EKF) fusing 500Hz IMU with 10Hz GNSS; designed cruciform canard array decoupling passive roll despin from pure lateral steering forces.
- Demonstrated in closed-loop 7-DOF simulation (7th DOF modeling roll-isolated collar dynamics); cut spin from 300 rps to < 5 rps with 2.34m CEP under IMU/GNSS sensor noise injection.

Physics-Regularized Geometric Manifolds for Surrogate-Assisted MDO of Tailless BWB UAVs

Aug 2026

- **Publication Status:** First-author preprint (DOI: [10.5281/zenodo.22893593](https://doi.org/10.5281/zenodo.22893593)); under external peer review at *Aerospace Science and Technology* (Elsevier, IF 6.4, Q1), Manuscript ID: AESCTE-D-26-06017.
- Formulated C^1 -continuous Hermite geometric manifold and active-learning 5-MLP surrogate ensemble with mass-centroid balancing, cutting solver calls by 80%+ across 50,000+ VLM evaluations compared to Latin Hypercube Sampling (AVL, XFOIL, AeroSandbox, OpenVSP).
- **High-Fidelity 3D RANS CFD:** Executed 3D incompressible RANS in SimScale cross-validated against SU2 (Spalart-Allmaras); identified 124% parasite drag rise ($CD_0 = 0.0242$, peak $L/D = 13.1$) over low-fidelity polar drag build-up from 0.84 m^2 turbulent wetted area at $Re = 800k$.
- **OpenCASCADE B-Rep Pipeline:** Built custom B-Rep lofting pipeline on OpenCASCADE to eliminate micro-gaps and zero-thickness trailing edges from polygon-to-NURBS translations, producing certified watertight solids for CFD meshing.

EXPERIENCE

Pradite (pradite.com)

Founder & Technical Lead

Kanpur, India

Aug 2026 – Present

- Founded zero-knowledge BYOK AI coding platform; led 5-person engineering team through full-stack architecture, security core, and Early Access launch.
- Engineered zero-trust cryptographic core: client-side XChaCha20-Poly1305 + Argon2id encryption (libsodium), sub-5ms encrypted IndexedDB index search, and direct client-to-model streaming with zero server-side storage.
- Built multi-provider inference engine with dynamic complexity routing across 17 APIs/runtimes (vLLM, Ollama); filed Class 42 trademark (IP India) and executed pre-incorporation co-founders agreement.

SOFTWARE ENGINEERING & OPEN SOURCE

scikit-learn Ecosystem (probabl-ai / skrub-data)

Open Source Contributor (ESoC)

Open Source

2025 – Present

- **skrub:** Refactored CheckInput pipeline logic to bypass eager evaluation of Polars lazyframes, cutting memory overhead during dataset ingestion.
- **skore:** Implemented multi-metric aggregate parameters for ImpurityDecreaseDisplay and CoefficientsDisplay, enabling flexible model explainability for tree and linear ensembles.
- Fixed figure-level legend persistence during file export in PredictionErrorDisplay; 5 merged PRs reviewed and approved by core maintainers (@glemaitre, @rcap107, @GaetandeCast).

PROJECTS

LLM-Assisted Parametric CAD Framework (onshape-mcp) | Python, Onshape REST API, MCP

2026

- Architected an agentic CAD system driving programmatic 3D geometry creation and parametric editing in Onshape via REST API from natural language specifications.
- Maintains bidirectional state tracking of geometric features, enforces topological constraints, and plans multi-step CAD feature trees derived from Onshape API schemas.

TECHNICAL SKILLS & INTERESTS

Languages:

C++, Python, Rust, TypeScript, JavaScript, SQL, Linux Shell / Bash

Robotics, GNC & CFD:

6-DOF Trajectory Sim, 16-State EKF Sensor Fusion, APN Guidance, SimScale (RANS CFD), SU2, OpenCASCADE, Onshape API, AVL, XFOIL

Data Science & ML:

PyTorch, scikit-learn, Optuna, NumPy, SciPy, Pandas, MLX, Physics-Informed ML

Systems & Hardware:

Git, GitLab CI/CD, Docker, Linux, WebAssembly, Supabase, PlatformIO, ESP8266

Interests:

Autonomous UAVs, Defense Technology, Chess (~1600 ELO), Hardware Builds
